Re: Radon Monitor Calibration Instructions and Software

I would like to inform you that the Environmental Radiation Measurements Laboratory at Ben-Gurion University of the Negev has been selected as an approved supplier of radon monitor calibrations to Sun Nuclear Corporation. As an approved supplier to the manufacturer, you are authorized to perform calibrations and provide calibration certificates to users of radon monitors manufactured by Sun Nuclear Corporation, including but not limited to the model 1027, 1028, and 1029 radon monitors.

As per our earlier discussions, we have provided you with procedures to follow for each radon type of SNC radon monitor. Please continue to coordinate your radon calibration processes with Sun Nuclear so that our customers can be provided with the most accurate calibrations possible.

We look forward to working together with you and your laboratory in the future.

Best Regards,

David Rayburn
